EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The prior art of record does not disclose or reasonably suggest the limitation of a random time distribution being established in accordance with white noise crossing a predetermined threshold in a predetermined direction, where the white noise is low pass filtered, and the filter bandwidth determines the average rate of generating sound event occurrences. *Borza et al.* discloses a method of generating a random number from zero crossings of noise, but omits low pass filtering the noise to determine the average rate of generating a random number. *Glazer* discloses a prior art patent, where it is stated that a random number is generated by comparing to a threshold, and that the signal may be passed through a low pass filter, so as to generate a number of bits of the same type, but does not suggest that the filter bandwidth determines an average rate of occurrences. Applicants' Specification, Page 8, Line 3 to Page 9, Line 5, states that a rate of stochastic events is determined by a user-selected (or system-selected) parameter for a constant of a low-pass filter, and that a smaller bandwidth for the parameter decreases the rate of generating events. The prior art of record does not disclose or reasonably suggest the limitation of generating a random distribution in accordance with noise crossing a predetermined threshold in a predetermined direction, where a filter bandwidth of low pass filtered noise determines an average rate of event occurrences. Applicants' Specification states that an embodiment involving a random

time distribution being generated by low pass filtered white noise works well for a wide variety of complex sounds.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
